

Move The World Forward

LIFT LINK[®]

Logisnext

Move Your Operation Forward

Lift Link® is an integrated telematics solution that connects you with your equipment. Face your business and operational challenges confidently with precise and actionable data delivered to you in real-time.

Whether choosing a factory installed or retrofitting your fleet, Logisnext's telemetry solution can be installed on almost any material handling truck. With Lift Link® from Mitsubishi Logisnext Americas, you can accomplish the goals of maintaining compliance, increasing productivity, monitoring and maintaining operator compliance, and reducing maintenance costs.

**Unlock the potential of
your fleet and operations.**

Increase
equipment
availability

Promote
safety

Gain control of your fleet with Lift Link[®]

Discover
equipment's
true potential

Improve control of
operator access

Manage
costs

Visibility into
fleet data

Display

Features a rugged display that is built to last. With a back-lit LCD display, and a 20-key pad, the screen is easy to use and suitable for some of the toughest environments.

Accompanied by a built-in RFID card reader, easily control operator access to specified trucks in your fleet.

Bright LED indicator lights for operator awareness.

Send messages directly to operators on trucks.

On-screen checklists aid in identifying potential equipment issues early.

Impact Detection

Monitor truck abuse and operator behavior with impact detection. Sophisticated self-learning algorithms learn normal truck and environmental vibrations for each truck which is factored into impact calculations. Respond to impact alerts with confidence and avoid false alerts.

Take action from any device with 24/7 access through a web-based portal.

Whether you are managing one truck or your entire fleet, operator or large groups, the intuitive platform makes it easy to configure settings.

Never lose track of your equipment with GPS Tracking. Set geofence zones to get notified when a truck violates a boundary.

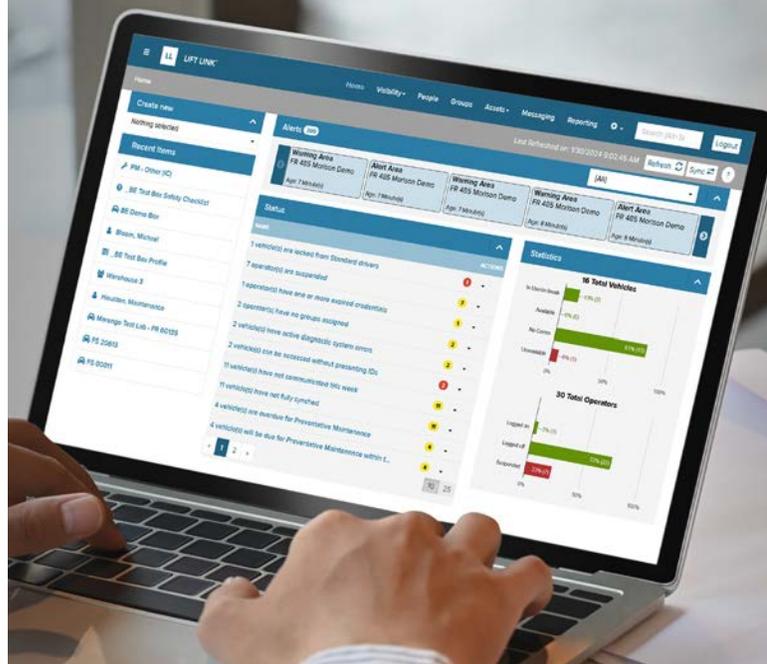

Stay up to date on critical events with text and email notifications.

Equipment sensors (impact, GPS, load, speed, etc.) capture precise data in real-time.

Configure idle timeouts and enable truck lockout for critical events and non-compliance.

With dashboards, graphs, and reports, quickly review the current state of your fleet and use the data to find operational improvements and efficiencies.
